

Senior React Native Engineer | Mobile Tech Lead | Full-Stack Web Development

Alberto Iván García Montemayor

Professional Summary

Senior React Native Engineer and tech lead with 6 years of experience building production mobile apps in the fintech and healthcare spaces. Currently serving as tech lead for the "I Love St. Jude" fundraising app at ALSAC; most recent full-stack project was lacasadechuyelrico.com, with online bookings, online payments, and real-time sync actions.

Work Experience

ALSAC (St. Jude Children's Research Hospital) — via Concentrix

Role: Senior Software Engineer / Project: I Love St. Jude

Jan. 2026 – Present

As tech lead for ALSAC's production fundraising application, drove product features that enable users to create and join fundraising teams, share multimedia content, and track campaign progress to support children's care at St. Jude. Led the build from scratch with domain-driven software architecture in TypeScript, using TanStack Query for API queries and Zustand as the central state manager, integrating both through custom hooks, in addition to i18n for translations and Okta for authentication. Incorporated Sentry, Detox E2E, and A/B testing for monitoring and quality; Reanimated animations; and implemented the designs using Figma as the design baseline. Remote (USA).

La Casa de Chuy el Rico

Role: Full-Stack Developer / Project: lacasadechuyelrico.com

Dec. 2025 – Jun. 2026

Built the site end-to-end — UX design, implementation, and deployment — for a photography location in Monterrey. Includes online bookings and payments through Conekta as the payment provider, with per-transaction webhooks and real-time synchronization (for example, appointment rescheduling or refunds initiated by users). Built it with Next.js and TypeScript, Supabase (PostgreSQL) as the database, and Vercel for deployment, plus Resend for email notifications and cron jobs for the automation of tasks.

Vector Casa de Bolsa

Role: Mobile Tech Lead / Senior Mobile Developer

Jan. 2020 – Aug. 2025

Project: Vit by Vector (2022–2025): Led mobile development for a financial marketplace (investment funds, exchange equities, insurance, and personal retirement plans). Managed a Scrum team of 6 developers, reviewing between 15–20 PRs each week, with biweekly releases for the QA team. Specialized in application security by applying Face ID biometrics, SMS-based MFA flows, AES-256 encryption for stored data, jailbreak/root detection, Frida detection to block runtime hooking, and native code obfuscation to hinder reverse engineering. Also implemented Jest unit tests to reduce incidents in QA/production.

Project: VectorApp (2020–2022): Built an investment-operations application in React Native (stocks, ETFs, mutual funds). Integrated Refinitiv APIs for market quotes and market data; developed custom charting components from scratch with Storybook. Also implemented push notifications, along with an adapter layer that translates legacy SOAP/XML services to REST/JSON in Laravel; reduced operations time by ~20%.

Accenture

Role: Web Developer

Sep. 2018 – Feb. 2019

Built an internal Angular portal within a Scrum team and implemented automated mobile UI testing with Appium and Selenium.

Education

Universidad de Monterrey (UEM)

B.Eng. in Computer Technologies

San Pedro, México

Aug. 2013 – Dec. 2020

Technical Skills

Spoken languages:

English (B2 — TOEFL 560), Spanish (native), French (B1).

Mobile:

React Native, TypeScript, TanStack Query, Zustand, Reanimated, Redux Toolkit, GraphQL, REST, Axios, Firebase, Sentry, Storybook, push notifications, i18n.

Web:

Next.js, React, Supabase (PostgreSQL), Angular, Laravel, PHP, Conekta, Resend, cron jobs.

Security:

Biometric auth (Face ID/Touch ID), MFA, Okta, encryption, secure storage, jailbreak/root detection, Frida detection, native code obfuscation.

Testing & Quality:

Jest, React Native Testing Library, Detox E2E, Appium, Selenium, A/B testing, linting, SOLID, PR code reviews.

Cloud & CI/CD:

AWS (Cloud Practitioner), Vercel, GitHub Actions, Git, TestFlight, Google Play, APK/AAB, QA coordination.
